

A. Currency Counterfeit Detector Pens **NEW!**

- The quick and simple way to prevent fraud by easily detecting counterfeit currency
- Pens are easy to use, no training required

Why take a chance on accepting large counterfeit bills? Specially formulated ink in the pen reacts with the starch in wood-based counterfeit paper to leave a dark colored mark and expose false currency. In contrast, the pen will leave a light colored mark on fiber-based paper used in authentic currency. Works best if used in conjunction with other methods of counterfeit detection.

Pen with adhesive holder features retractable plastic coil to keep pen handy at all times. Scabbard holder sticks to clean, flat surfaces.

MMF Counterfeit Detector pens are protected from bacterial and fungal growth with Agion® Antimicrobial protection.

Model No.	UPC Code	Description
200045110*	0 78541 16706 3	Counterfeit Detector Pen

Not guaranteed to detect all counterfeit bills

B. Counterfeit Detector Pen w/UV Light Cap

- Two effective tests in one convenient, pocket-sized unit
- UV light and patented ink provide maximum security against bill counterfeiting

Inexpensive tool for detecting bad bills and deterring counterfeiters from passing false currency. Patented ink tests the paper fibers for authenticity. Powerful UV light helps to detect currency security thread and may also be used to authenticate other official documents such as credit cards, driver's licenses, passports and most foreign currencies. Cap includes three button cell batteries that are easily replaceable. U.S Patent 5393556 and patents pending.
